Rapid Method of test for Sodium Chloride except for controversy, in which case testing shall conform to paragraphs 33.047-33.054 and paragraph 33.069 of the eleventh edition of "Official Methods of Analysis of the Association of Official Analytical Chemists", or comparable atomic absorption analysis.
2. Particle size analysis shall consist of using sieves with square openings mounted on substantial frames or interlocked in a manner as to insure loss of material during sieving. Woven wire cloth shall conform to AASHTO M-143-70. Gradation analysis shall be made on over dried material and the sample shall Wright after drying at least 500 grams. In no case shall the fraction retained on any sieve at the completion of the sieving operation weight more than four grams per square inch of sieving surface (this is 200 grams for 8 inch diameter round sieves). If sieving is completed by hand shaking lateral and vertical motion with occasional jarring action so as to keep the material moving continuously over the surfaces of the sieves for a time of not less than three (3) minutes. When mechanical shaking is provided, the time limit shall be a maximum of five minutes. The balance or scale shall be sensitive to within 0.22% of the weight of the sample to be tested.
3. Moisture content shall be determined by a method of weighing before and after over drying at  $110 \text{ degrees} \pm 5 \text{ degrees C}$  ( $230 \pm 9 \text{ degrees F}$ ) for a minimum of four (4) hours.
4. The test for anti-caking material shall be made following the attached method for the colorimetric determined of YPS treated rock salt. For an anti-caking material other than UPS, the successful bidder shall indicate the chemical nature of the material, and shall furnish a laboratory procedure for determining the amount of anti-caking material to the Department of Public Works, 700 Allens Avenue, Providence, RI 02905, within 30 days of the award of the bid by the Purchasing Department.

## INSPECTION

The purchaser or his representatives shall be provided free entry and access at the storage area for sampling. It is anticipated that determination for initial compliance will be made from samples obtained from the supplier's storage areas or from railcars if no storage area are provided within the State. Shipments to the purchaser's point of delivery may be randomly sampled for moisture content and gradation control. If in doubt, complete analysis may be made on these samples.
