BID PACKAGE SPECIFICATIONS

Background Information

Providence City Hall, at 25 Dorrance Street in Providence RI, is located at the southwest end of Kennedy Plaza. Built in 1878, Providence City Hall is now listed on the National Register of Historic Places. The building's construction is of iron and brick, faced with Westerly granite on the Dorrance and Washington Street sides and New Hampshire granite on the other two sides. The sidewalks are granite blocks, 5 to 6 feet wide and 18 to 20 feet long. The entire structure was built on an artificial foundation set atop 3,128 pilings driven deep into the underlying hardpan. The existing roof is comprised of slate, membrane, and copper detailing.

The City of Providence is seeking quotes from responsible vendors for significant historic restoration work on the exterior of Providence City Hall. The building is one of the most prominent historic structures in the City but has been left without proper maintenance for years. The City now seeks to begin a multi-phase effort to completely restore the exterior of the building, repairing decades of damage and decay. The City has engaged DBVW Architects (DBVW) to study the history of the building, evaluate its existing conditions, and develop plans to restore the building to its original historic character while improving some of the inherent issues with the original 1878 design. DBVW have developed the set of construction documents which form the basis of this design.

Scope of Work

Providence City Hall has experienced reoccurring leaks due to wear on the building's roof systems as well as issues with the original design. Observed leak areas are located throughout the upper interior floors, including the perimeter offices, archives, and crawl spaces. Repairs to the exterior include re-construction of the building's eight chimneys in 2022, various window sealant applications, as well as spot roof repairs to both the membrane and slate. Rainwater drain leaks have contributed to water accumulating in the basement. All interior areas are currently fully occupied by office and administrative staff and will remain occupied for the duration of the restoration work.

Based on the extensive damage and wear to the building, following a year of investigating history and existing conditions, the City and our design team at DBVW have developed plans for a phased restoration of the building to its original watertight status. The full restoration of the building will be completed in several phases over many years, the scope of work for this project consists of Phase 1. Phase 1 will focus restoration work on the building's main dome and two "front" roof pavilions facing Kennedy Plaza. Future phases will restore the remaining roof systems including low slope roofs, gutters, and rainwater drains as well as a full masonry restoration and repointing.

The full scope of work is defined in the attached drawing package and project specifications. General Contractors are requested to provide proposals for performance of the full scope of restoration work defined in the attached drawings and manual, as well as defined add-alternates for the restoration of Providence City Hall. Proposals will be evaluated to ensure that they meet the qualification requirements laid out in the attachment B) project specifications. Following evaluation to ensure bids are qualified, the project award will be made to the lowest qualified bidder. Bidders' attention is directed to the sections of the project specifications defining the required qualifications for trades on the highly specialized historical work. Qualifications packages for all trades and subs with required qualification metrics defined in the specifications must be submitted with the project proposal to allow the City to confirm that all proposed trades are qualified to perform this work.

This work will include the following items within the defined work area of Phase 1, as laid out in the attached drawing package and specifications including, but not limited to: Full replacement of the slate shingle high-slope roof system including underlayment, removal, restoration, and reinstallation of all decorative copper elements, in place cleaning, repair, and

waterproofing of cast iron elements, removal of existing low-slope roof systems, cleaning, repair, and repointing of all masonry, cleaning, repair, and replacement of existing gutter systems, and the design and construction of scaffolding required to perform this work. The total scope of work and requirements for work performed are documented in the attached drawing package and specifications. There are two items identified as alternates, outside the baseline scope though desired to be included if possible. The baseline scope consists of restoration of the building’s dome, with the intent to include both front facing pavilions if cost allows. See the following Alternates section for details.

The City will be requiring the use of a Project Labor Agreement (PLA) on this project in order to ensure all City labor ordinances are followed and the project is not disrupted by any labor disputes. A draft PLA is attached for bidder review, note that the items highlighted in yellow in the text will be finalized during negotiations between the City, winning firm, and local labor organizations following project award.

City Hall will remain active during the period of construction; the winning bidder will coordinate this work with the owner to minimize the impact on the occupants of the building. The chosen contractor shall be responsible for securing all necessary construction permits. The contractor shall coordinate approval of their scaffolding design with the design team and City personnel. The contractor shall coordinate the logistics of material storage and laydown space as well as debris removal with the owner taking into account the specific challenges of working in the very limited space surrounding City Hall.

The contractor will be responsible for timely removal of all construction debris and demolished materials from the site. Earlier hazardous materials testing has identified that much of the sealants, putties, and sealants used on roof penetrations on City Hall contain asbestos, so appropriate demolition and disposal controls will need to be followed with these materials. The City has hired a hazardous materials consultant to perform additional testing for asbestos, lead, and PCBs following the erection of scaffolding to provide them access to the workspace. Bidders should carry an allowance of \$100,000 for hazardous materials abatement in the event their testing identifies additional problematic materials.

A pre-bid conference will be held on September 14, 2026 (three weeks after advertisement) at 10 am on site for prospective bidders to inspect the area and ask questions of the design team and the City’s representative.
